DETAILED ACTION

This Office action responds to the amendments in papers no. 9 and no. 11 filed on 2/24/2003 and on 4/17/2003, respectively.

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37CFR1.114, including the fee set forth in 37CFR1.17(e), was filed in this application after the final rejection in paper no. 8, mailed on 12/17/2002. Since this application is eligible for a continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 6/23/2003 has been entered.

Acknowledgment

2. The amendments in papers no. 9 and no. 11, filed on 2/24/2003 and on 4/17/200, respectively, in response to the Office action in paper no. 8, mailed on 12/17/2002, has been entered. The present Office action is made with all the suggested amendments being fully considered. Accordingly, pending in this Office action are claims 19-32.

Art Unit: 2814

Specification

3. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

6. Claim 30 is rejected under 35 U.S.C. 103(a) as being unpatentable over Nicewarner (US 5776797) in view of Chauvel (US 4623986).

7. Regarding claim 30, Nicewarner shows (see, e.g., figs. 3-5) most aspects of the instant invention including an assembly structure for a memory device, said assembly comprising:

Art Unit: 2814

- a common substrate **12** having multiple sections
- a first layer **32** of a memory array disposed on a first section of the multiple sections
- a second layer **32** of a memory array disposed on a second section of the multiple sections
- at least one fold line **71** disposed on the common substrate **12** to define the alignment of the memory arrays on the first and second sections

wherein the sections may be folded on each other at the fold line **71** to form an operable electronic device (see, e.g., fig. 3).

Nicewarner also shows the memory array on the first section comprising a first plurality of conductor lines **70**, the memory array on the second section comprising a second plurality of conductor lines **68**, and that at least one of the memory arrays may comprise semiconductor materials (see, e.g., col.11/ll.29-35).

The first and second sections are folded along the fold line **71** so that the layers **32** of memory arrays are in contact with each other (see, e.g., fig. 3). Both sections comprise semiconductor materials and patterns thereon (see, e.g., col10/ll.25-34 and col.11/ll.29-34). Nicewarner further describes (see, e.g., col.1/ll.53-54) that his techniques are applicable to any form of commercially available memory chips, but fails to show the layers of memory arrays having a matrix of memory cells.

Chauvel, on the other hand, teaches (see, e.g., col.1/ll.52-53) that it is well known that memory chips consist of matrixes of memory cells.

Art Unit: 2814

Consequently and as taught by Chauvel, it would have been obvious at the time of the invention to one of ordinary skill in the art that the layers of memory arrays of Nicewarner have matrixes of memory cells thereon, since this is commonly known in the semiconductor art.

Allowable Subject Matter

8. Claims 31 and 32 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
